

Josue Daniel Guido Beteta

Alajuela, Costa Rica • [linkedin.com/in/josué-guido](https://www.linkedin.com/in/josué-guido) • +506 60696809 • josuguido@gmail.com

Cloud & DevOps-focused Software Engineer with 2+ years of experience building production backend services, automating CI/CD pipelines, and operating AWS infrastructure (Lambda, API Gateway, Aurora, VPC, IAM, SNS/SQS). Hands-on with Docker, Kubernetes, Terraform, and observability tooling (Prometheus, Grafana, ELK Stack) through production work and self-directed infrastructure projects. Focused on reliability, automation, and Infrastructure as Code.

PROFESSIONAL EXPERIENCE

MobyDyg

Software Engineer – Cloud & Backend

Remote

July 2024 - Present

- Work daily with AWS services including Lambda, S3, Cognito, API Gateway, Aurora, CloudWatch, SNS, SQS, and SES to support and improve cloud-based applications.
- Build and maintain backend services and database integrations based on product and business needs.
- Use Docker and Linux-based workflows for development, deployment, and troubleshooting.
- Managed access control and network security within AWS VPC, configuring Security Group rules and IAM policies to control database and resource access across dev, test, and prod environments.
- Automated software delivery and vulnerability management by integrating Trivy, Dependabot, and release-please into the release process.
- Designed and deployed event-driven serverless architectures using Lambda, SNS/SQS, EventBridge, and API Gateway to support high-concurrency workloads.
- Delivered a production scheduling platform end-to-end, integrating 3 third-party APIs (Infobip, Chatwoot, Timekit) for multi-channel support and calendar sync.
- Cut page load times by 75%+ (15–17s → under 3s) on a production Angular application by implementing lazy-loading, skeleton screens, and bundle optimization.
- Collaborate across application, infrastructure, and product concerns, contributing to backend, database, and cloud-related work.
- Built REST APIs powering an internal AI-driven, multi-channel conversation platform, including real-time session-state management (timeouts, inactivity detection, auto-closure) and bilingual (ES/EN) intent classification.
- Implemented real-time conversation state management, including configurable timeouts, inactivity detection, and automatic session closure.

TECHNICAL SKILLS

- Cloud Infrastructure: AWS (Lambda, S3, Cognito, API Gateway, SNS, SQS, Aurora, SES, CloudWatch, VPC, IAM, EventBridge)
- Infrastructure as Code: Terraform, Linux, Bash

- Containerization & Orchestration: Docker, Kubernetes
- Observability & Monitoring: Prometheus, Grafana, ELK Stack, Alertmanager
- CI/CD & Automation: GitHub Actions, GitLab CI, Trivy, Dependabot
- Backend & Data: [Node](#), Go, C#, TypeScript, Postgresql, Redis, REST APIs

EDUCATION

Full Stack Web Development Bootcamp Academia-X | Remote *Jan 2023 – Feb 2024*

LANGUAGES

- Spanish — Native
- English — Working proficiency
